

IS MY

ERP-SYSTEM READY

FOR ESG REPORTING?

YOUR DATA
ALREADY KNOWS

WHAT IS ESG?

ESG stands for Environment, Social and Governance, and describes a comprehensive set of rules for evaluating the sustainable and ethical actions of companies.

It is derived from Corporate Social Responsibility (CSR) and summarizes these in concrete figures.

WHO MUST REPORT?

When standing up for a just, humane and sustainable world becomes a binding responsibility. See here for whom the sustainability reporting obligation applies:

[WHAT-IS-ESG.COM](https://www.what-is-esg.com)

AN EXAMPLE OF HOW YOUR SAP SYSTEM CAN SUPPORT YOU HERE

IMPLEMENT THE PROCESS FOR WASTE MANAGEMENT.

The invoice from the waste disposer is only posted as a monetary amount in FI, but the resulting waste quantity is not posted in Logistics. However, you need both for the report.

We go the extra mile for you and deliver all SAP aspects for ESG clearly as defined tasks and recommended actions.

#OnPoint #NailedIt

compliant

data readiness for ESG reporting

SAVE UP TO 70% OF RESOURCES BY INTELLIGENTLY EXPORTING THE DATA FOR THE ESG REPORT FROM THE SAP SYSTEM.

CHALLENGES THAT WE CAN IDEALLY HELP YOU WITH:

Data Availability

Your Enterprise Resource Planning (ERP) system is the number one source of data, because it controls and integrates the core business processes in your company. However, a lot of data is not yet available because there has been no reason to explicitly collect ESG relevant data so far.

Data Quality

For sustainability reporting, various data from different departments must be collected and compiled. Quality differences in the data can lead to inaccurate reports and thus to incorrect presentation (cf. §331 HGB).

Measurability

Another challenge in sustainability reporting is measuring aspects of sustainability for the first time. This is made more difficult when data is available but it is not clear whether its quality meets the high requirements.

OUR SOLUTION

Is my ERP-System ready for ESG reporting?

Your ERP system is **60%** ready to comply with ESG reporting requirements.

Environment is 38% ready

This result is composed of:

- // 2 aspects with no data in ERP system available
- // 3 aspects that show ESG traces
- // 3 aspects that are ESG reporting feasible

Social is 50% ready

This result is composed of:

- // 1 aspect with no data In ERP system available
- // 1 aspect that is ESG reporting feasible

Governance is 100% ready

This result is composed of:

- // 1 aspect that is ESG reporting feasible

„Hello, my name is Markus-Alexander Kötzle.

I have worked through all the guidelines and carried the requirements into the depths of the SAP system with my specialist knowledge.

Continuously, I stay in the middle of the action for you and can tell you exactly where and how best to start today.

Prepare now to be able to collect a year's worth of data to export smartly at the end. I'll show you how.“
